Professional Summary

Full-Stack Software Engineer with hands-on experience building scalable web applications and systems using Go, React, and REST APIs. Skilled in developing concurrent backend services, responsive frontend interfaces, and production-ready distributed systems with a strong focus on performance, scalability, and reliability. Experienced in building data pipelines, authentication systems, and cloud-deployed applications, with a consistent focus on delivering efficient and high-quality software solutions.

Technical Skills

Languages: Go (Golang), C++, C, JavaScript (basic), HTML, CSS, React

Backend & Frameworks: Gin, Fiber, Tailwind CSS, REST APIs, Middleware, JWT Authentication, Microservices, Distributed systems

Databases: MySQL, PostgreSQL, MongoDB, Redis

Tools: Git, GitHub, Docker, Linux, Postman, Render, Vercel, Playwright, CI/CD, Kubernetes (basic), Nginx, Swagger/OpenAPI

Core CS: Data Structures & Algorithms, Concurrency, Goroutines, Distributed Systems, System Design, Operating Systems, Computer Networks, OOP

Soft Skills: Communication, Team Collaboration, Performance optimization, Debugging, System reliability, Observability, Performance, Leadership

Experience

Software Engineer Intern

Jan 2026 – Present *LIMDX PRIVATE LIMITED, Remote*

- A financial data extraction system in Go, processing stock market data for 500+ companies through robotized batch scraping and structured parsing workflows.
- Increased scraping throughput by 60% using Goroutines and parallel data collection techniques for efficient multi-symbol processing at scale.
- A fault-tolerant backend architecture with checkpoint recovery and retry handling, ensuring reliable execution and zero data loss across interrupted runs.

Projects

Automated Financial Data Extraction & Analysis System

github

- A stock market analysis platform in Go capable of extracting and transforming financial datasets for 500+ companies from multiple web sources.
- Optimized large-scale scraping efficiency by implementing Goroutines and asynchronous data collection workflows, reducing execution time by 60%.
- A resilient resume and checkpoint system to prevent duplicate processing and maintain consistent execution across interrupted scraping sessions.
- Architected reusable scraping, parsing, and configuration modules, reducing debugging complexity by 35% and simplifying system extensibility.
- Engineered a high-volume HTML parsing and transformation pipeline converting raw web content into structured datasets with reliable processing accuracy.

Repository-Centric Kubernetes Security Analysis Framework

github

- Built a Kubernetes security analysis framework to identify infrastructure misconfigurations by parsing Helm charts and converting manifests into structured validation graphs.
- A DevSecOps workflow integrating GitHub repository scanning and Kubernetes manifest analysis for large-scale infrastructure security assessment.
- Implemented security validation modules detecting RBAC privilege escalation, network exposure risks, container security issues, and secret misconfigurations across cluster namespaces.
- Engineered a WebSocket-based remediation system enabling automatic fix execution and interactive security operations on live Kubernetes environments.
- Designed posture scoring and risk prioritization modules aggregating security findings into actionable insights for improved cluster security visibility.

Email-Intelligence-Platform

github

- A full-stack email intelligence platform capable of handling 5000+ daily verification requests with 99.9% validation accuracy.
- RESTful backend services in Go integrating DNS MX record analysis, SMTP verification, and multi-domain email validation workflows.
- Optimized verification performance by 40% using Goroutines and asynchronous request handling for efficient large-scale email processing.
- Implemented real-time validation indicators, CORS handling, and debugging utilities to improve frontend-backend communication and reduce troubleshooting effort by 30%.

Achievements

- Solved **449+ LeetCode** and **149+ GfG** problems.
- Finished and deployed scalable backend systems using Go, concurrent processing, REST APIs, and cloud deployment workflows.
- Won **1st Prize** for Smart Blind Stick (Arduino + ultrasonic sensors) detecting obstacles within **2m**.

Education

Dayananda Sagar University, Bengaluru

B.Tech in Computer Science

8.67/10 2022 – 2026

Certifications

- Go: The Complete Guide (Udemy)
- Mastering Data Structures & Algorithms using C and C++ (Udemy)
- Linux Bash Scripting Training (Infosys Springboard)
- Linux Shell Scripting Solutions (Infosys Springboard)
- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
- SQL(Advanced) (HackerRank)
